Registered in England and Wales: 3451362

Capability Statement

Awaken is a networked group of performance specialists dedicated to sustainable operational improvement. All our consultants have extensive experience in their field and are flexible and creative enough to work alone or be combined in to larger self-managed teams. We can work as external consultants or fully integrated within client teams as short term Company resources.

We combine our portfolio of skills in to a range of combinations valued by our Clients. Normally these fall in to four key areas;

1. Safety, Health and Environmental Performance management, improvement and audit
2. Logistic and Operational process and efficiency improvement
3. Project risk management and Assurance
4. Management up skilling and training

Our flexibility extends to a global reach with Associates established in Central America, The Caribbean, Europe, Southern Africa, Australia and SE Asia. Co-ordination is normally through our UK head office but our virtual footprint means we can be extremely flexible and therefore cost effective. We also maintain close relationships with similar specialist companies operating in our four key areas.

Projects recently executed by Awaken or its Consultants have included:

- Implementation of Health, Safety, Security & Environment Systems (covering business governance, new office & accommodation start up, Company & contracted field operations, joint venture partner interface from initial activity risk assessments through to companywide emergency and crisis management) in to new oil and gas exploration venture organisations in China and Qatar.
- Delivering of Environmental, Health & Social Impact Assessment (Regulatory engagement and Permit delivery, Environmental Action Plan, Waste Management; Emergency Response & Spill Prevention; Closure & Reclamation; Mitigation & Social Impacts; Consultation & Disclosure; Community Development Plans)
- Design, development and delivery of management up skill programmes in resource management, information management and operational improvement.
- Implementation of Environmental Performance Indicators and Energy Management Plans in to complex industrial facilities.

Established in 1997, registered in England and Wales and based in Shropshire, England.
