

Capability Statement 2015

Awaken is a network of performance specialists dedicated to sustainable operational improvement. Our consultants have extensive experience in their field and the flexibility and creativity to work alone or to combine in to larger teams. We can work as external consultants or within Client teams as fully integrated Company resources.

We apply our skills in to a range of combinations valued by our Clients; these are,

1. Management and assessment of project operations, risk, governance, audit and assurance.
2. Process and efficiency improvement in logistics and operations.
3. Safety, Health, Security and Environmental performance management and improvement.
4. Competence development, training and assessment.
5. Leadership Skills development

Our flexibility extends to a global reach with Associates established in The Americas, Caribbean, Europe, Africa, Australia and SE Asia. Co-ordination is through our UK office but our virtual footprint means we can be extremely flexible and therefore cost effective. We also maintain close relationships with similar specialist Companies operating in our five key areas.

Projects recently executed by Awaken and its Consultants have included:

- Project and operational risk management for the rationalisation and standardisation of a global risk management system for a Blue Chip Oil Major.
- Development of process safety operational standards, identification of critical tasks and structured analysis of major hazard scenarios for a large tanker fleet; including assurance and governance processes for technical safety.
- Implementation of global database for incident and assurance management including action tracking through to conclusion of remedial actions.
- Health, Safety, Security, Environment and Social Performance management within upstream exploration projects for onshore fracking, exploration seismic and deep water drilling campaigns.
- Development and implementation of Health, Safety, Security & Environment Systems (covering business governance, operational start up, company & contracted operations, joint venture partner interface from activity risk assessments through to emergency and crisis management)
- Design, development and delivery of management leadership and training programmes in resource management, information management, operational improvement, and HSSE Management.
- Implementation of Environmental Performance Indicators and Energy Management Plans in to complex industrial facilities.
- Development and Implementation of Third party oil storage management and operational standards including Auditing and Assessment of Oil storage and logistics facilities. This includes assessment of such facilities in M&A and contracting activities.
